

# Junior V Fitting Instructions

Please read the following instructions carefully before attempting to install the Junior V Concertina Ladder.

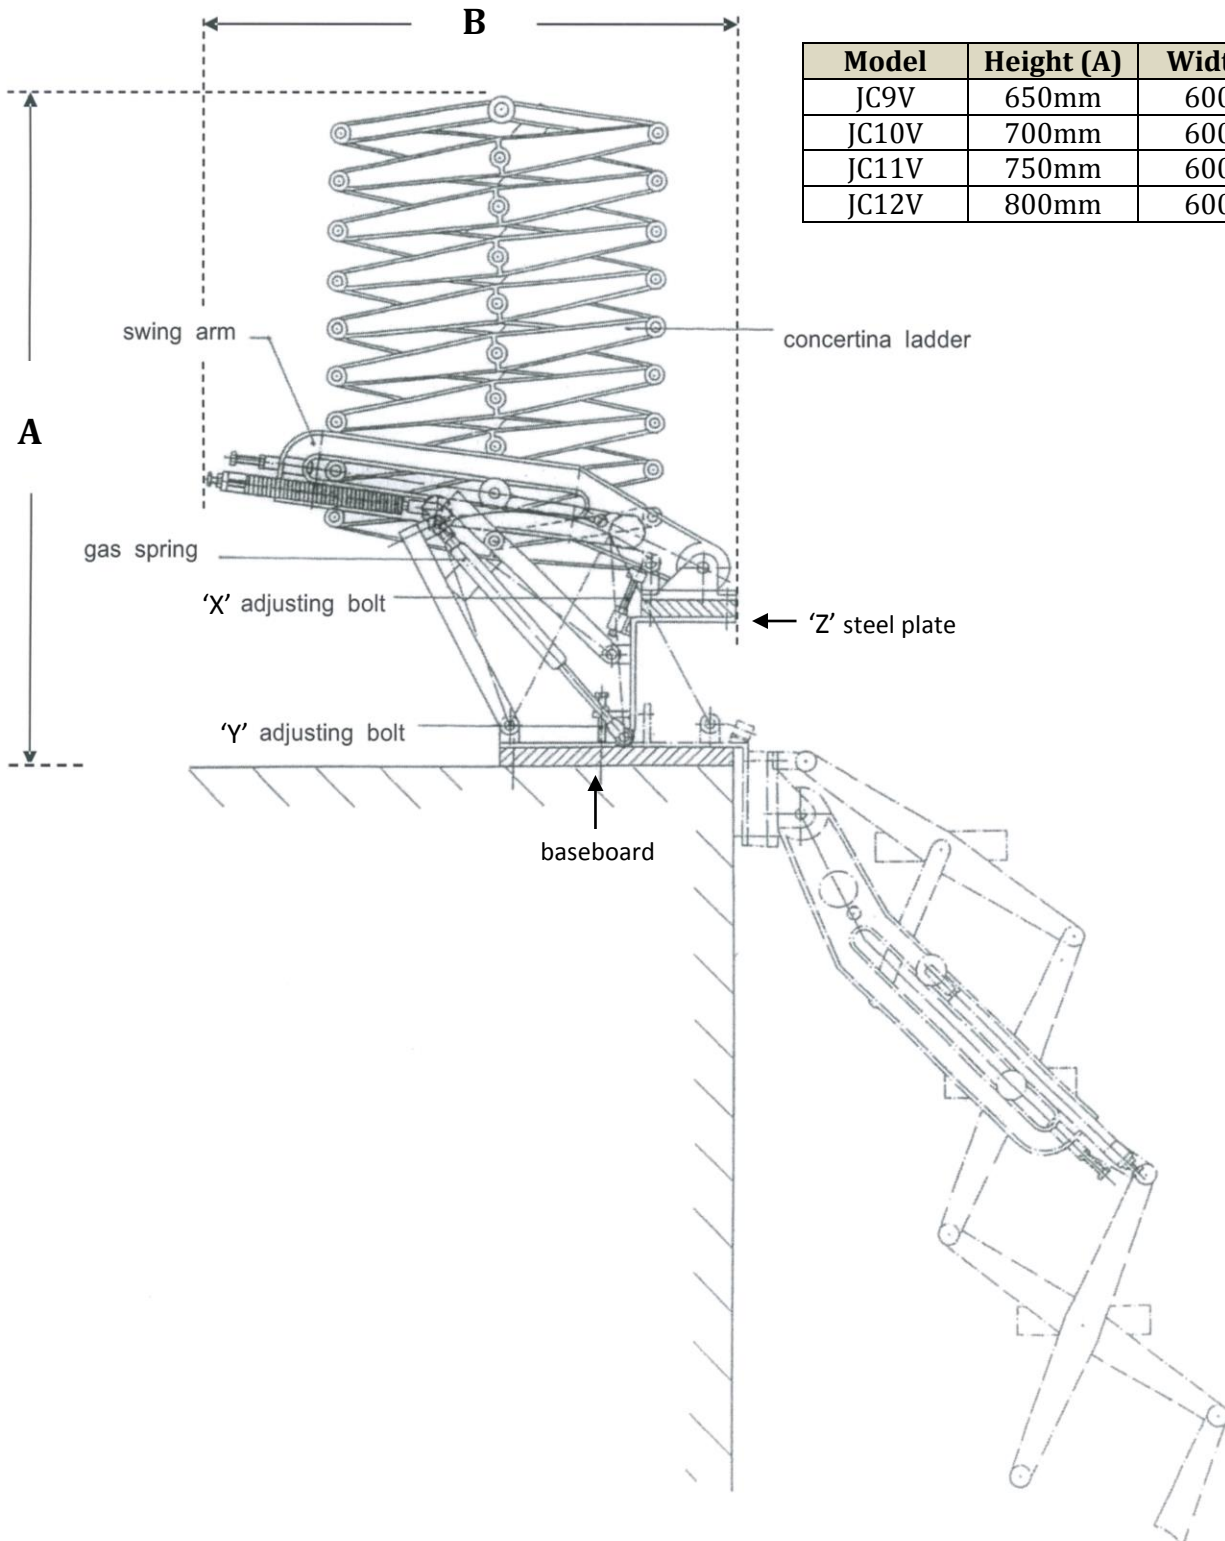

1. Position the ladder on the edge of the floor as per the diagram and affix baseboard to the floor.
2. When installing the ladder behind a door, where the door intrudes into the loft space, the baseboard will need to be trimmed down (max 40mm) so that the new edge of the baseboard is flush to the back of the door.

*Make sure that as the ladder is deployed the face of the steel plate 'Z' clears the face of the edge of the floor / top of the wall.*

A felt pad (not supplied) or similar can be glued to the face of 'Z' to protect the wall or fascia.

3. Bolt 'Y' can be adjusted to allow the ladder and bracket to lean back into the loft space sufficiently to allow door to close.
4. Bolt 'X' can be adjusted to allow the ladder to be more upright, making access to the ring on the bottom tread easier for the pole.

# Junior V Fitting Instructions

Model	Height (A)	Width (B)
JC9V	650mm	600mm
JC10V	700mm	600mm
JC11V	750mm	600mm
JC12V	800mm	600mm
