

How to Extend the Reach of the VCL to Allow for a Thicker Door

1. Remove 'End Stop' screws from both sides of the carriage board.

2. Roll the carriage board out so that it sits past the base board.

3. Cut the carriage board rebate that runs in the "h" channel back by the amount required to suit the additional thickness of the door. Repeat on the other side.

The unmodified carriage board allows for a door thickness of 25mm. So, for a door 50mm thick, the carriage board rebate will need to be cut back by a further 25mm.

4. Once the rebate has been extended on both sides of the carriage board, slide the carriage board back and refix the 'End Stop' screws removed in Step 1.

5. Check that the ladder is free from obstructions before being used.
